UCSFilesManager – categories and keywords

This guide explains how UCSFileManager decides where a sound file goes, which categories exist, how to name files so they are sorted correctly, and how to change categories and keywords yourself.

The complete list of categories, subcategories and keywords is in CATALOG.md. It is generated from the category list.

How to write FX Name, Description, Keywords, genre, BPM and key is described in METADATA-STYLE-GUIDE.md. The fixed genre list is in GENRES.md.

1. UCS in short

The Universal Category System (UCS) is a shared standard for naming and sorting sound effects. Every sound gets a **CatID** at the start of its file name:

```
D00RCreak_0ld Barn Door 01.wav
└─CatID─┘
```

The CatID points to a **category** and a **subcategory**, which are also the folders the file is moved to:

```
UCS/DOORS/CREAK/D00RCreak_0ld Barn Door 01.wav
```

The category list in this project has three parts:

Part	Content	Count
Official UCS	82 categories: AIR, DOORS, WEAPONS ...	753 CatIDs
AI GENERATED	One subcategory per official UCS category, 10 AI-only subcategories + MISC	92 CatIDs
Music production	17 categories for instruments, loops, stems and finished tracks	167 CatIDs

2. How the app finds the category

The app does two things, in this order.

Step 1: files that already have a UCS CatID

If the file name **starts with** a known CatID, the file is moved straight to the right folder without being renamed.
SYNTHPad_warm.wav goes straight to SYNTH/PAD/.

This is case sensitive: SYNTHPad_... is recognised, synthpad_... is not.

Step 2: all other files – one point per word

- 1. The file name is lowercased, and spaces become _.
- 2. The name is split into words on _.
- 3. Each CatID gets **one point for every word** that is also in its keyword list.
- 4. The CatID with the most points wins. On a tie, the app shows a selection window.

Example: Synth Lead Supersaw 01.wav becomes the words synth , lead , supersaw and 01 .

CatID	Matching words	Points
SYNTHLead	synth, lead, supersaw	3
SYNTHPad, SYNTHArp and the other SYNTH subcategories	synth, supersaw	2
VOCLLead	lead	1

SYNTHLead wins, and the file is renamed SYNTHLead_Synth Lead Supersaw 01_....wav .

No points means the app can't suggest anything, and you pick from the full list.

3. Naming files so they land in the right place

- **Separate words with _ or spaces.** Kick_01 and Kick 01 give the word kick . Kick01 is one word and matches nothing.
- **A hyphen does not split words.** hi-hat is one word, so it is also in the keyword list.
- **Write both instrument and role.** synth_pad matches better than just pad , and vocal_chop better than just chop .
- **A loop of one instrument:** write the instrument and "loop", for example banjo_loop_90.wav . It then goes to BANJO (see 4.3).
- **AI-generated sounds:** include an AI word (ai , elevenlabs , suno , tts ...) together with what the sound is, for example AI_explosion_big.wav or elevenlabs dog bark.wav .
- Numbers, key and tempo (120 , Amin , 124bpm) do no harm. They just don't score.

Check a file name before moving anything:

```
python tools/build_catalog.py --match "Vocal Chop Am 120.wav"
```

4. The categories

4.1 Official UCS

The 82 official categories and their keywords are unchanged from UCS. The project only adds a few extra keywords, such as footstep / footsteps in FOOTSTEPS, and fixes two keywords whose character encoding was broken (Quinceañera , Sauté).

4.2 AI GENERATED

AI sounds get their own folders with the same structure as UCS: AI GENERATED/EXPLOSIONS (AIExpl), AI GENERATED/ANIMALS (AIAnml) and so on. ARCHIVED is left out because it is an admin folder, not a sound type. AI sounds that don't fit anywhere else go to AI GENERATED/MISC (AIMisc).

Sounds that only exist with AI

Generative AI can make sounds with no counterpart in nature or in a recording. They have their own subcategories:

Subcategory	CatID	What	Example file name
MORPH	AIMorph	One sound gradually turning into another	ai_morph_dog_into_car

Subcategory	CatID	What	Example file name
HYBRID	AIHybrid	Two sources fused at the same time	ai_hybrid_lion_engine
TIMBRE TRANSFER	AITimbre	A performance re-rendered with another timbre	timbre_transfer_voice_to_violin
IMAGINARY INSTRUMENT	AIInstr	Instruments that don't exist	ai_imaginary_instrument
IMAGINARY WORLD	AIWorld	Soundscapes of places that don't exist	ai_alien_planet_ambience
IMPOSSIBLE PHYSICS	AIPhys	Sounds that break physics	ai_impossible_glass_bend
SURREAL	AISurr	Dreamlike, uncanny, liminal	ai_surreal_dream
GIBBERISH	AI Gibb	Speech in no real language	ai_gibberish_speech
ARTIFACT	AI Artf	The sound of the model itself: hallucinations, metallic smearing	ai_artifact_garbled
LATENT SPACE	AILatent	Random generations without a prompt, latent walks	ai_latent_walk

The keywords

The keywords of each AI subcategory are built from three parts:

1. **AI words** shared by all AI subcategories: ai, aigen, aigenerated, ai-generated, genai, elevenlabs, stableaudio, audiogen, audiocraft, audioldm, texttoaudio, text2audio. "generated" and "generative" are left out on purpose: generative music and procedurally generated sounds are not necessarily AI.
2. **Category words**, for example explosion and explosions.
3. **The words from the official subcategory names**, for example dog, horse and rifle. Three kinds of words are left out:
4. words that appear in three or more categories, such as misc, impact and handle
5. words that are also music keywords, such as bass from DESIGNED/BASS DIVE and track from SPORTS/TRACK & FIELD. Otherwise "ai_bass" would land in AI GENERATED/DESIGNED.
6. words that belong to the AI-only subcategories, such as morph from DESIGNED/MORPH

Two AI subcategories also have their own tool names:

Subcategory	Tool names
AI GENERATED/MUSICAL	suno, udio, musicgen, mubert, aiva, soundraw, boomy, riffusion, lyria
AI GENERATED/VOICES	tts, texttospeech, voiceclone, respeecher, playht, narrator

A normal file such as Wood_Door_Creak.wav gets no AI option, because it has no AI word.

AI music and instruments: ai_drum_loop.wav lands in DRUMS/LOOP, not AI GENERATED, because "drum" and "loop" give two points while the AI word gives one. The app can't require "AI word *and* drum word"; it can only count matches. If you know a file is AI-generated, either: - put the CatID at the start of the name yourself (AIMusc_drum_loop.wav), so it is moved without asking, or - include the tool name and a music word (suno_ai_song) and pick AI GENERATED/MUSICAL in the selection window

4.3 Music production

Category	CatShort	Subcategories
DRUMS	DRM	KICK, SNARE, CLAP, SNAP, HIHAT, CYMBAL, TOM, RIM, FILL, BREAK, LOOP, TOP LOOP, MISC
PERCUSSION	PERC	HAND DRUM, SHAKER, TAMBOURINE, COWBELL, BLOCK, SCRAPER, TRIANGLE, ORCHESTRAL, ELECTRONIC, BODY, FOUND, SLEIGH BELL, LOOP, MISC
TUNED PERCUSSION	TPRC	MARIMBA, XYLOPHONE, VIBRAPHONE, GLOCKENSPIEL, CELESTA, CHIMES, BELLS, GONG, KALIMBA, STEEL DRUM, MISC
KEYS	KEYS	PIANO, ELECTRIC PIANO, ORGAN, CLAVINET, HARPSICHORD, MELLOTRON, MISC
SYNTH	SYNTH	LEAD, PAD, PLUCK, ARP, CHORD, STAB, DRONE, BELL, BRASS, STRINGS, VOICE, CHIPTUNE, MISC
BASS	BASS	SYNTH, 808, SUB, ELECTRIC, UPRIGHT, GROWL, MISC
GUITAR	GITR	ELECTRIC, DISTORTED, ACOUSTIC, NYLON, SLIDE, BANJO, UKULELE, MANDOLIN, FX, MISC
STRINGS	STR	VIOLIN, VIOLA, CELLO, CONTRABASS, HARP, ENSEMBLE, FX, MISC
BRASS	BRAS	TRUMPET, TROMBONE, FRENCH HORN, TUBA, ENSEMBLE, FX, MISC
WOODWINDS	WWND	FLUTE, CLARINET, OBOE, BASSOON, SAXOPHONE, FREE REED, ENSEMBLE, MISC
ORCHESTRA	ORCH	ENSEMBLE, HIT, MISC
VOCALS	VOCL	LEAD, PHRASE, RAP, CHOP, ADLIB, SHOUT, CHOIR, BACKING, SPOKEN, PROCESSED, BREATH, BEATBOX, FX, MISC
WORLD	WRLD	PLUCKED, BOWED, WIND, PERCUSSION, VOCAL, MISC
SAMPLE	SMPL	LOOP, CHOP, VINYL, FOUND SOUND, MISC
FX	FX	RISER, DOWNLIFTER, SWEEP, IMPACT, SUB DROP, REVERSE, NOISE, GLITCH, SCRATCH, ATMOS, MISC
TRACKS	TRK	CINEMATIC, CLASSICAL, SUSPENSE, AMBIENT, ELECTRONIC, HIP HOP, POP, ROCK, JAZZ & BLUES, SOUL & FUNK, FOLK & COUNTRY, WORLD, CHIPTUNE, CORPORATE, KIDS, STINGER, JINGLE, MISC
STEM	STEM	DRUMS, PERCUSSION, BASS, KEYS, SYNTH, GUITAR, STRINGS, BRASS, WOODWINDS, VOCALS, FX, MIX

The rules behind the structure

1. Instrument family first, then role. Playing style (chords, riffs, distorted ...) is not a category of its own, except where it is a sample-pack convention: synth lead/pad/pluck, vocal chop and drum loop.

2. Family words + role words. Every subcategory in a family has the family's words (all SYNTH entries have `synth`, `synths`, `analog`, `moog`, `juno` ...), and each subcategory adds its own. That is what makes words pointing in different directions still land correctly:

File name	Lands in	Because
<code>synth_bass</code>	BASS/SYNTH	both "synth" and "bass" are there
<code>brass_stab</code>	BRASS/ENSEMBLE	"brass" and "stab"
<code>vocal_chop</code>	VOCALS/CHOP	"vocal" and "chop"
<code>drum_stem</code>	STEM/DRUMS	"drum" and "stem"

File name	Lands in	Because
orchestral_track	TRACKS/CINEMATIC	"orchestral" and "track"

3. Loops go with the instrument. The subcategory says *what* is playing, not whether it is a loop or a one-shot. The word "loop" stays in the file name, so it can still be searched for.

File name	Lands in
banjo_loop_90	GUITAR/BANJO
sitar_loop	WORLD/PLUCKED
conga_loop_100	PERCUSSION/HAND DRUM
synth_bass_loop	BASS/SYNTH
drum_loop_90	DRUMS/LOOP
top_loop_124	DRUMS/TOP LOOP
perc_loop	PERCUSSION/LOOP
melodic_loop_Am	SAMPLE/LOOP
rock_song_loop	TRACKS/ROCK

LOOP subcategories only exist where a loop mixes several instruments: DRUMS (LOOP and TOP LOOP), PERCUSSION and SAMPLE. Whole songs go in TRACKS.

Exceptions that keep the rule working in practice:

- **PERCUSSION/LOOP and MISC** are the only percussion subcategories with the family words (`perc`, `percussion` ...). If all had them, "perc_loop" would tie with HAND DRUM, SHAKER and the rest.
- **DRUMS/TOP LOOP** has "loop" but not the drum words, so "drum_loop" goes to DRUMS/LOOP.
- **TUNED PERCUSSION/STEEL DRUM** has "drum" (steel drum) but not "loop". Otherwise it would catch drum loops.

4. No overlap with official UCS where it can be avoided. Music vocals are `VOCALS / VOCL` , while `VOICES / VOX` is unchanged from UCS. Foley and field recordings belong in the official `FOLEY` and `AMBIENCE` .

The official `MUSICAL` category covers some of the same instruments, such as `MUSCWind` , `MUSCStr` and `MUSCKeyd` . A file name with a single instrument word, such as `clarinet.wav` , therefore gets two suggestions: WOODWINDS/CLARINET and MUSICAL/WOODWIND. Both are correct; pick the one that fits your library.

5. TRACKS is sorted by genre. Each genre in GENRES.md points to one TRACKS subcategory, and the genre names are keywords there ("amapiano_track" lands in TRACKS/WORLD). Names that are also instrument or sound-effect words (breakbeat, folk, industrial) are left out. STINGER (victory, game over, level complete) and JINGLE (jingles, audio logos, idents) are the exceptions, because short cues can be in any genre.

6. Every family has a MISC for what doesn't fit anywhere else.

5. Changing keywords and categories

The category list is in `catalog/` and can be opened in Numbers, Excel or a text editor:

File	Content
catalog/ucs_official.csv	Official UCS with all translations

File	Content
catalog/custom_categories.csv	AI GENERATED and the music categories
catalog/match_tests.csv	Test file names and where they must land
catalog/genres.csv	The genre list for the Genre and Subgenre metadata fields, with TRACKS category and typical BPM

data.txt , keywords/*.txt , UCS(folders).zip , catalog/_categorylist.xlsx , docs/CATALOG.md and docs/GENRES.md are **generated from the CSV files**. If you edit keywords/*.txt directly, your change is overwritten the next time the list is built.

Adding a keyword

1. Open catalog/custom_categories.csv (or ucs_official.csv).
2. Find the row and add the word to the **Synonyms - Comma Separated** column, separated by a comma.
3. Run `python tools/build_catalog.py --test` , then `python tools/build_catalog.py` .

Keyword rules

- **Single words only.** "french horn" can never match. Write frenchhorn and horn .
- **Lowercase only.** The app lowercases the file name before comparing.
- **Plurals are not automatic.** Write both kick and kicks .
- **Accented letters are fine.** The build script automatically adds the spelling a Mac may use for such letters in file names, where "ó" is stored as "o" plus an accent mark. Add an ASCII variant as well (cajon next to cajón) for people who type without accents.
- **Words removed on purpose.** The logic reviews took these words out because they pulled unrelated files into one subcategory:
 - saw : a hand saw landed in SYNTH
 - gate : collided with DOORS/GATE
 - vintage : "vintage_synth" landed in SAMPLE/VINYL
 - legato / staccato : brass and woodwinds landed in STRINGS
 - swell : strings landed in BRASS
 - bars : "8 bars" landed in VOCALS/RAP
 - dark , calm , action : mood words that pulled files into TRACKS
 - game , success , fail : UI sounds landed in TRACKS/STINGER
 - acoustic , electronic : descriptors, not drum words
 - slam , flow , scratching , digital , crunch , drill , grime , swing , chamber , business : common sound-effect words (door slam, water flow, power drill, reverb chamber) that pulled sound effects into the music categories
- **Don't put common words on a single subcategory.** Words like hit , loop and melody appear in many file names. If such a word is on only one subcategory, it pulls in files that belong elsewhere. Run the tests after every change.

Adding a subcategory

Add a row with Category, SubCategory, CatID, CatShort, Explanations and keywords. The build script rejects the row if:

- the CatID already exists, or the category/subcategory pair is already used
- a name contains a comma (it breaks data.txt)
- the CatID contains a space, _ or -
- the CatID doesn't start with the CatShort
- the CatID is the start of another CatID, or the other way round. The app would then move files that already have a UCS name to the wrong folder.

- the row has no keywords, has keywords with spaces, or has uppercase keywords
- Category or SubCategory is not uppercase

Commands

```
python tools/build_catalog.py          # check and build everything
python tools/build_catalog.py --check  # check only
python tools/build_catalog.py --test   # run the tests in catalog/match_tests.csv
python tools/build_catalog.py --match "file.wav" "file2.wav" # show what the app would
suggest
python tools/build_docs.py             # build docs/CATALOG.md and docs/GENRES.md
python tools/build_docs.py --pdf       # also build docs/UCS-catalog.pdf (needs markdown and
Chromium/Chrome)
```

The tools in `tools/` need Python 3.8 or newer (the app itself does not need Python). The build script only uses Python's standard library. `openpyxl` is only needed for the spreadsheet `_categorylist.xlsx`, and `markdown` only for the PDF.

The tests

`catalog/match_tests.csv` has one line per file name: the file, the CatID it must get, and how many options the selection window may show at most. Add a line every time you find a file name that lands in the wrong place, fix the keywords and run `--test` until everything passes.

6. Suggesting metadata for a whole library

`tools/suggest_metadata.py` goes through every audio file in a folder (for example a drive of sample packs) and writes a spreadsheet with a suggestion per file. It renames nothing.

Column	Content
Path	Full path of the file
Pack	The pack folder (with <code>--pack-depth 2</code> : publisher / pack)
Confidence	<code>high</code> , <code>medium</code> : ... (with the reason), <code>already UCS</code> , or <code>REVIEW</code> : ... (rows highlighted)
CatID, Category, SubCategory	Suggested category
FX Name	Suggested FX Name, following the style guide (25 characters, Title Case, number)
Suggested File Name	<code>CatID_FX_Name_CreatorID_SourceID_UserData</code> , unique in the whole library
Description	Draft description: what it is, loop/one-shot, bars, BPM, key, root note, AI tool
Genre, Subgenre	From genre names in the pack, folder or file names (music categories only)
BPM, Key, Root Note, Bars	Read from the file and folder names; key spelled as in the style guide
Keywords	Sound words from the file and folder names plus plain synonyms of the CatID, nothing already in FX Name, Description or Genre
Alternatives	Other CatIDs that scored the same

```
python tools/suggest_metadata.py "/path/to/Sample Packs" -o sample-packs.xlsx --creator JLP
python tools/suggest_metadata.py file-list.txt --root "/path/to/Sample Packs" --pack-depth 2 -o
sample-packs.csv
```

Instead of a folder you can pass a text file with one path per line, for example made with `find "/path/to/Sample Packs" -type f > file-list.txt`. Use `--root` to say which folder the paths are relative to (by default the folder they all share), and `--pack-depth 2` when the folders are `Publisher/Pack/...`. Next to the output it writes `...-problems.csv`: every row that breaks a rule of the style guide (FX Name length and format, file name fields, key spelling, keyword format). It should be empty.

How it decides the category:

- File-name words count most, folder words half, the pack name a tenth. Words only one subcategory has ("kick") count more than words several share ("drum"); describing words ("open", "dist") and genre words ("jungle", "disco") count less.
- The nearest folder that names an instrument family (`Rap Vocals` , `Piano` , `Bass Hits` , `Synth Loops`) adds to that family, unless the file itself names another family (`Postcards - Bass.wav` in `Guitar Loops` is a bass).
- Genre names are taken out before scoring ("Future Bass", "Drum & Bass", "Bass House"), and so is the publisher's name where it is spelled out (`Overdrive Audio - Guitars - Shot 16.wav` is a guitar, not a distorted guitar). Pack codes such as `ZEN_` , `OPS_` , `RawCut` are ignored.
- "No Kick", "NoKick", "without hats" remove that word.
- AI GENERATED needs an AI word or tool name; TRACKS needs a track word ("full track", "song", not "Track 02" of a kit); STEM needs "stem", "construction kit" or "songstarter", or "full mix"; VOCALS needs a vocal word in the path; a steel drum needs "steel"; a sub drop needs "sub", "boom" or an FX folder (in a kit, "Drop Lead" is the lead of the drop).
- When nothing in the file or folder names matches, the pack name decides (`Vintage Drum Breaks` , `Soul Jazz Piano`). A loop with no instrument at all becomes `SMPLLoop`.
- A loop is a file with "loop", "beat" or "groove", a tempo, bars or a key in its name, or a tempo in its folder name. The nearest name that says loop or one-shot decides. One-shot drum types (kick, clap...) stay one-shots even with the pack tempo in their name.

How it writes the names:

- FX Name: describing words first, then the instrument, then "Loop", then the number. Codes, producer and kit names, tempos, keys and bar counts are left out; dictionary words and words three or more publishers use are kept (`catalog/english_words.txt` is the word list).
- The number is the file's own number when it has one (not the tempo, not a pack volume, not a round-robin or variation number); names are made unique by counting up.
- The SourceID is made from the pack folder name: "Lofi Dreams" → `LOFIDREAMS` , "Trap Essentials Vol 2" → `TEV2` .
- Keywords: only words that describe the sound ("Ethereal", "Gritty", "Vinyl", "Tremolo"), never pack codes, producer names, abbreviations or words that are in more than 1 % of all files, plus at most a few synonyms per CatID ("Bass Drum" on a kick, "Arpeggio" on an arp). Many rows have no keywords: the FX Name and Description already say everything the names tell.

The suggestions come from names only; the audio is not analysed. Read the rows marked REVIEW before renaming anything, and spot-check the rest by pack.

7. Known limitations

These are in the app itself (`UCSFilesManager.exe`). Its source code (`V37.py`) is not in the repository, so they can't be fixed from here.

- **Only .wav , .mp3 , .flac and .aac are found.** .aif / .aiff and .ogg are skipped, even though .aif is common in sample packs.
 - **Only _ and spaces split words.** Kick01 , kick-01 and kick.01 don't become kick .
 - **Keywords with spaces can never match.** Five official UCS keywords have this problem, and the build script shows them as warnings.
 - **Official ROBOTS and SCIFI have "ai" as a keyword.** ai_robot_voice.wav can therefore get suggestions from both AI GENERATED and official ROBOTS.
 - **Case matters for files with a UCS name.** drmkick_01.wav is not recognised as DRMKick .
-

8. From the first draft (_categorylist.numbers)

If you already renamed files with CatIDs from the first spreadsheet (DRMKi , WOWIFlu ...), catalog/README.md lists the new CatIDs they correspond to.

UCS Music – metadata style guide

How to write the file name, FX Name, Description, Keywords, genre and musical information (BPM and key) for sounds in the music categories: DRUMS, SYNTH, VOCALS, TRACKS, STEM and the rest. The same rules apply to AI GENERATED.

Basis. This guide follows the UCS specification for file names and fields, and common practice in commercial sound and sample libraries. The A Sound Effect style guide (asoundeffect.com/metadata-style-guide) was not reachable when this guide was written, so it is **not checked against it**. Differences from it should be corrected here.

1. The fields that describe a sound

Where	Field	What it is for	Example
File name	CatID	Sorts the file into the right folder	SYNTHLead
File name	FX Name	Short title, read in a file list	Saw Lead Riff 03
Metadata	Description	The full description; what people search and read	Bright detuned saw lead playing a syncopated riff...
Metadata	Keywords	Words that aren't in the Description but people will search for	Supersaw, Festival, Anthem
Metadata	Genre	Main genre from the fixed list	Trance & Hard Dance
Metadata	Subgenre	Subgenre from the fixed list	Trance

Music adds **BPM**, **Key**, **Bars** and **Time Signature**.

Language: write all metadata in **English**. Search tools, the UCS catalog and customers use English.

2. The file name

The UCS file name has fixed fields, separated by underscores:

```
CatID_FX Name_CreatorID_SourceID_UserData.wav
```

Field	Rule	Example
CatID	Exactly as in the catalog, same upper and lower case	BASS808
FX Name	Short title. See chapter 3.	Long Distorted 808 01
CreatorID	Who made the sound: initials or a short name	JLP
SourceID	The library or project, short and uppercase	TRAPKIT
UserData	Musical information: BPM, key or root note	140bpm Fmin

Rules for the whole file name

- **Underscores separate fields and must not be used inside a field.** Use spaces inside FX Name.

- Right: `Saw Lead Riff 03`
- Wrong: `Saw_Lead_Riff_03`, because every UCS tool will then read "Lead" as the CreatorID.
- **Only the letters A–Z, digits, spaces and hyphens.** No accented letters, `/`, `#`, `&`, `( )`, `?` or `*`.
- File names with special characters can change between Mac and Windows, or break in zip files and cloud services.
- For `#` in keys, write `Csharp` or `Db` in the file name, and `C#` in metadata.
- **Numbering:** two digits at the end of FX Name, preceded by a space: `01`, `02` ... `99`. The number separates variations of the same sound. It is not a version number.
- **No dates, "final", "v2", "new" or "copy"** in file names that are published.

AIMorph_Dog Bark Into Car Horn 01_JLP_AILAB.wav
```

In UCSFilesManager

The app puts the CatID in front and uses the original file name as FX Name. So:

1. **Clean up the file name before running the app**, so it already is a good FX Name (chapter 3). The app removes `(` and `)`, but fixes nothing else.
2. In **UCS Custom Format**, write the rest of the name, for example `$filename_JLP_NEONPACK`.
3. Add BPM and key yourself, either at the end of the original file name or afterwards.

The app writes **only the file name**. Description, Keywords, Genre, BPM and Key have to be written into the file's metadata (BWF/iXML) with a separate tool, such as Soundminer, BaseHead or Reaper.

3. FX Name

FX Name is the title you see in a file list. It should be readable in one second.

Rules

- **25 characters at most**, as UCS recommends. The number counts.
- **Capitalise every word** (Title Case): `Warm Rhodes Chords 02`
- **Order:** `[Character] [Source/instrument] [Role/action] [Loop] [Number]`
- `Tight Snare 03`
- `Dusty Rhodes Loop 02`
- `Airy Female Vocal Chop 07`
- **Write Loop in the FX Name of every loop.** Loops share the instrument folder with one-shots (BANJO, PIANO ...), so the word "Loop" is what tells them apart.
- **No BPM, key or time signature in FX Name.** They belong in UserData and metadata.
- **Don't repeat the CatID if you need the space.** In `DRMKick`, "Kick" is already said. Write it anyway if there is room: the name should be readable without the CatID.
- **No internal codes or abbreviations** only you understand. `Rhodes` is fine, `RHD_MK1` is not.

Bad	Good	Why
kick_final_v2	Punchy Kick 02	no version, Title Case, spaces
Lead 124bpm Fmin	Saw Lead Riff 03	BPM and key belong in UserData
Synth Thing	Wobbly Pluck Arp 01	says what it is
Beautiful Emotional Cinematic Piano Chords	Soft Piano Chords 04	under 25 characters; mood belongs in Description

4. Description

Description is the field that is searched and read, and the most important field after CatID.

Rules

- **One to three sentences in English, in sentence case, ending with a full stop.**
- **Most important first.** Many tools only show the first 60–80 characters.
- **Fixed order:**
 - **What:** source or instrument and role. "Warm Rhodes electric piano playing a slow chord progression."
 - **How:** character, playing technique and development. "Soft attack, tremolo, swells in the last bar."
 - **Musical:** BPM, key, bars and time signature. "4 bars, 90 BPM, D minor, 4/4."
 - **Source/technique**, when useful: instrument model, microphone, amp and processing. "Fender Rhodes Mk I through a Fender Twin, close mic."
- **Describe what you hear, not what you feel.** "Bright, detuned, fast attack" is good. "Amazing, epic, insane" is not.
- **No marketing**, no "perfect for ..." and no emojis.
- **Sung or spoken words** go in quotes, and the language is named: Female vocal phrase singing "hold me closer" in English.
- **Repeating words from FX Name is fine.** The Description must make sense on its own.

Examples

File	Description
Kick	Punchy acoustic kick drum, short decay with a tight beater click. Ludwig 22" kick, inside and outside mic blended.
Drum loop	Funky breakbeat drum loop with ghost notes on the snare and open hi-hats. 2 bars, 96 BPM, 4/4. Vintage-style compression.
Synth lead	Bright detuned saw lead playing a syncopated riff with portamento. 8 bars, 124 BPM, F minor, 4/4. Serum, light chorus and delay.
808	Long distorted 808 bass with pitch glide down at the end. Root note C1, one-shot, 3 seconds.
Banjo loop	Bluegrass banjo playing a fast forward roll pattern. 4 bars, 120 BPM, G major, 4/4. Five-string banjo, close mic.
Vocal chop	Airy female vocal chop, pitched "ah" with reverb tail. 1 bar, 128 BPM, A minor. Female, English.
Track	Epic orchestral cinematic track with Nordic folk elements: Hardanger fiddle, low brass and taiko. Builds from a quiet intro to a full climax. 100 BPM, D minor, 2:34, full mix.

File	Description
Stem	Drum stem from "Rise Of The North": taiko, toms and cymbal swells. 100 BPM, D minor, 2:34.
AI	AI-generated morph of a dog bark turning into a car horn. Generated with [tool, model and version]. Prompt: "dog bark morphing into a car horn".

5. Keywords

Keywords are for words people will search for that are **not** in FX Name or Description.

Rules

- **Comma-separated, in Title Case like UCS:** Supersaw, Festival, Anthem
- **5–20 words.** More words give worse search results, not better.
- **Include** synonyms (Uplifter for Riser), instrument names and models (Juno , Rhodes , 808), mood (Dark , Uplifting), playing technique and articulation (Pizzicato , Palm Mute) and common spellings (Hi-Hat , Hihat, Hat).
- **Don't include** genre, BPM, key, CreatorID, SourceID or file format. They have their own fields.
- **Don't repeat words** from FX Name and Description. They are searched anyway.
- **No keyword stuffing.** Every word must be true for this exact sound.

Example for the synth lead

Supersaw, Festival, Anthem, Hook, Melody, Detuned Saw, Euphoric

Don't confuse this field with `keywords/*.txt` in UCSFilesManager. Those files are used by the app to *find* the CatID and have their own rules: single words and lowercase. See USER-GUIDE.md. The Keywords metadata field can hold multi-word terms such as `Palm Mute`.

6. Musical information

BPM

- Whole numbers: 124 . Use decimals only when the tempo really is that: 92.5 .
- In the file name (UserData), write 124bpm in lowercase without a space. In metadata, the BPM field holds just the number, and the Description says 124 BPM .
- **Loops must loop seamlessly and be a whole number of bars** at the stated BPM.
- One-shots get no BPM.

Key

One fixed spelling for all 24 keys:

Major	Minor
C, G, D, A, E, B, F#, Db, Ab, Eb, Bb, F	Amin, Emin, Bmin, F#min, C#min, G#min, Ebmin, Bbmin, Fmin, Cmin, Gmin, Dmin

- **Major is just the note:** G . **Minor adds min :** Amin . Not Am , A minor or a .

- **Use the same name for the same note**, as in the table: F# , Db , Ab , Eb and Bb . Never write A# where the table says Bb .
- In **file names**, write # as sharp : F#min becomes Fsharpmin . In metadata, write F#min .
- In the Description, write the key in full: F sharp minor , D major .
- **Atonal material** (noise, percussion, FX) gets no key.

Root note for one-shots

Bass, 808, synth and instrument notes that are a single pitch get a **root note with octave**: C1 , F#2 , A3 .

- **Use scientific pitch notation**: C4 is middle C (261.6 Hz) and A4 is 440 Hz. Ableton and some other DAWs call middle C C3 , so the library documentation must say which convention is used.
- A tuned kick or tom can get a root note. An untuned kick does not.

Bars and time signature

- In the Description: 4 bars , 4/4 . The time signature never goes in the file name, because / is not allowed in file names.
- State the time signature either only when it isn't 4/4, or always. Pick one rule for the whole library.

7. Genre (Genre and Subgenre)

Genre has **two metadata fields of its own**: Genre and Subgenre . Both are chosen from the fixed list in GENRES.md, which is generated from catalog/genres.csv . The list has 17 main genres and about 130 subgenres, with typical BPM and the TRACKS category each belongs to.

Main genres

Hip Hop · R&B & Soul · Pop · House · Techno · Trance & Hard Dance · Dance & EDM · Bass Music · Electronic · Rock · Jazz & Blues · Folk & Country · Latin & Caribbean · Afro · Global · Cinematic · Classical

Rules

- **Genre: exactly one main genre** from the list.
- **Subgenre: none, one or two subgenres** from the list, separated by a semicolon: UK Drill or UK Drill; Grime .
- The first must belong to the main genre.
- The second may come from another main genre when the sound is a crossover.
- **Leave Subgenre empty** when the sound is just "general" in its main genre, such as plain pop or rock. That is why the list has no subgenre called "Pop" or "Rock".
- **Spell names exactly as in the list**: same case, & and hyphens. Drum & Bass , not DnB or Drum and Bass . Lo-Fi Hip Hop , not lofi .
- **Don't invent new genres in the field**. If a genre is missing, add it to catalog/genres.csv (with main genre, TRACKS category, typical BPM and a short description) and run python tools/build_catalog.py --check .
- **Genre doesn't go in the file name or in Keywords**. It has its own field. Do mention it naturally in the Description when it describes the sound: "UK drill beat with sliding 808s".

These are not genres and go in Keywords or the Description instead:

Type	Examples	Where
Performance	Live Instruments , Acoustic , Unplugged	Keywords

Type	Examples	Where
Mood	Dark , Happy , Uplifting , Melancholic	Keywords
Use	Corporate , Kids , Vlog , Podcast	Keywords. For whole tracks the CatID can be TRACKS/CORPORATE or TRACKS/KIDS.
Era	80s , 90s , Vintage	Keywords or Description
Instrument	Piano , Guitar	CatID and Description

When is genre required?

Sound type	Genre / Subgenre
TRACKS	Required. The TRACKS category (CatID) must match the genre's column in GENRES.md.
STEM	Required, same genre as the track.
Loops (all music categories) and SAMPLE	Required when the loop has a clear style, for example Hip Hop / Boom Bap .
One-shots	Optional. Only when the sound is made for a genre, for example a trap 808.
Music FX (risers, impacts ...)	Optional.
AI GENERATED/MUSICAL	As for TRACKS and loops.
Sound effects (official UCS and the rest of AI GENERATED)	Not used.

Where the fields are stored: a field named Genre (and Subgenre), as user-defined fields in Soundminer or BaseHead. WAV files also have IGNR (Genre) in the INFO chunk, and MP3 has the ID3 frame TCON . If there is only room for one genre field, write Hip Hop; UK Drill .

8. Rules per category

Category	FX Name starts with	Must be in the Description	UserData
DRUMS (one-shot)	character + drum: Tight Snare	drum machine or kit, room/mic	root note if tuned

Category	FX Name starts with	Must be in the Description	UserData
DRUMS (loop, break, fill)	style + Loop / Break / Fill	bars, time signature, style	96bpm
PERCUSSION	instrument: Conga Slap , Shaker Loop	playing technique	bpm for loops
TUNED PERCUSSION / KEYS	instrument + role: Rhodes Chords	model, technique	bpm + key, or root note
SYNTH	character + role: Saw Lead Riff	synth and plugin, development	bpm + key, or root note
BASS	type + character: Long Distorted 808	glide and length	root note (one-shot), or bpm + key
GUITAR / STRINGS / BRASS / WOODWINDS / WORLD	instrument + technique: Banjo Roll Loop	instrument, articulation, mic	bpm + key
VOCALS	character + type: Airy Female Chop	lyrics in quotes, language, voice type	bpm + key
SAMPLE	style + type: Dusty Soul Loop	source and origin (rights!)	bpm + key
FX	type + character: White Noise Riser	length, direction	bpm if tempo-synced
TRACKS	track title + version: Rise Of The North Full	mood, instrumentation, length (genre in its own field)	bpm + key
STEM	track title + stem: Rise Of The North Drums	which track, what the stem contains	same bpm and key as the track
AI GENERATED	as for the category the sound would otherwise have	tool, model and version, and prompt	as otherwise

TRACKS: versions

Use the same version names at the end of FX Name across the whole library:

Full · Instrumental · 60s · 30s · 15s · Loop · Stinger · Alt · Underscore

```
TRKCine_Rise Of The North Full_JLP_NORDICSCORE_100bpm Dmin.wav
TRKCine_Rise Of The North 30s_JLP_NORDICSCORE_100bpm Dmin.wav
STEMDrums_Rise Of The North Drums_JLP_NORDICSCORE_100bpm Dmin.wav
```

AI GENERATED: transparency

- Always write the **tool, model and version** in the Description, for example "Generated with ElevenLabs Sound Effects v2". Add the **prompt** too when you can.
- Put the tool name in Keywords: ElevenLabs , Suno and so on.
- Check the tool's license terms before the sound is sold or shared, and state the license in the library documentation.
- If you edited the sound heavily afterwards, say so: "AI-generated source, edited and layered by hand."

9. Checklist before publishing

- [] The CatID is correct. Run `python tools/build_catalog.py --match "file.wav"` to check.

- [] No underscores inside FX Name, and no special characters in the file name.
- [] FX Name is at most 25 characters, in Title Case, says what the sound is and has a two-digit number.
- [] Loops have `Loop` in FX Name, BPM in UserData, and loop seamlessly.
- [] Keys are spelled as in the table (`Fmin` , `Bb`). Pitched one-shots have a root note (`C1`).
- [] The Description is in English, most important first, with no marketing.
- [] Keywords are 5–20 words, without genre, BPM, key or repetition.
- [] Genre and Subgenre are spelled exactly as in GENRES.md. They are required for TRACKS, STEM and loops with a clear style.
- [] The TRACKS category (CatID) matches the genre.
- [] AI sounds have tool, model and version in the Description.
- [] Stems have the same BPM and key as the track.

Genres (Genre and Subgenre)

Generated by `tools/build_docs.py` from `catalog/genres.csv`. Don't edit this file; change the CSV file and run the script again. The rules for the fields are in `METADATA-STYLE-GUIDE.md`.

17 main genres and 131 subgenres. Write genre names exactly as here, with the same case, hyphens and `&`.

Changes from the first genre list

"Live" is no longer a main genre. It describes music played on real instruments, not a genre, and is written as the keyword `Live Instruments`. "Hip Hop" under Hip Hop, "Pop" under Dance and "Rock" under Live are no longer subgenres: only the main genre is set and Subgenre is left empty. "Indian" is merged into South Asian, and "Brazilian", "Caribbean" and "Latin American" into Latin & Caribbean. "Dance" is split into House, Techno, Trance & Hard Dance and Dance & EDM, and the pop genres have their own main genre, Pop. "Classical" is now a main genre, and Cinematic and Classical have subgenres. The table lists subgenres that were moved, renamed or added. The rest keep their name but may sit under a new main genre.
